Unit 5 · Session 10 · SLO 1 — Solved Worksheet

Name: DEEP SAND DEEP SAND | **Reg. No:** RA2511026010557

Unit â€“ 5 : Session â€“ 10 : SLO â€“ 1 | Real-Time Interaction Through Trigger Functions

I. Questions & Answers

1. Trigger function â€” a callback function registered to a widget (or event) that is automatically invoked when the associated event fires, e.g. a button's command function.

2. When they execute â€” at the moment the triggering event occurs (button click, key press, timer), dispatched by the event loop in real time, not at a fixed point in the program's sequence.

3. Simple trigger function â€”

• import tkinter as tk

• def on_click():

• print("Button triggered!")

• root = tk.Tk()

• tk.Button(root, text="Fire", command=on_click).pack()

• root.mainloop()
