Unit 5 · Session 12 · SLO 1 — Solved Worksheet

Name: DEEP SAND DEEP SAND | **Reg. No:** RA2511026010557

Unit â€“ 5 : Session â€“ 12 : SLO â€“ 1 | Documenting and Presenting a Python-Based Dissertation

I. Questions & Answers

1. Key parts of a project report â€” Abstract, Introduction (problem statement and objectives), Literature/Technology Survey, System Design (architecture, module diagram), Implementation (code, screenshots), Results and Testing, Conclusion and Future Work, References.

2. Presenting a Python project â€” start with the problem and chosen paradigm, show the architecture, give a live demo of the running program, walk through 2â€“3 key code sections, present test results, and close with limitations and future scope.

3. Why documentation matters â€” it lets others (and your future self) understand, reproduce, maintain and extend the project; it is also the primary artifact examiners evaluate for correctness of analysis, design and results.
