Unit 5 · Session 7 · SLO 2 — Solved Worksheet

Name: DEEP SAND DEEP SAND | **Reg. No:** RA2511026010557

Unit â€“ 5 : Session â€“ 7 : SLO â€“ 2 | Event Loops, Event Sources and Handlers

I. Questions & Answers

1. Event loop â€” the central infinite loop (e.g. Tkinter's mainloop()) that continuously waits for events, dequeues them and dispatches each to its registered handler.

2. Event source â€” the object that generates events, e.g. a button being clicked, a key being pressed, a timer expiring, or a socket receiving data.

3. Event handler â€” the function/method registered to run in response to a specific event from a source, e.g. the callback executed when a button is clicked.

II. Flow

• Event source raises event â†’ event loop catches it â†’ matching event handler executes â†’ control returns to the loop.
