Universal Human Values — II · 21LEM202T

Unit 3 · Session 6 · SLO 1 — Solved Worksheet

Name: DEEP SAND DEEP SAND | **Reg. No:** RA2511026010557

Unit – 3 : Session – 6 | From Family Order to World Family Order

Part C — Long-Answer Questions (Solutions)

• Q1. The scope of systems moves outward in concentric levels: FAMILY → FAMILY CLUSTER → VILLAGE → VILLAGE CLUSTER → CITY → ... → NATION → WORLD FAMILY (order). At every level, the SAME five dimensions (education-sanskar, health-self-regulation, production-work, justice-preservation, exchange-storage) apply, and the same comprehensive human goal holds. A UNIVERSAL HUMAN ORDER is the state where these systems, at every level from family to world, are run on the basis of right understanding — ensuring the human goal for every unit. It is not a world government imposed by force but an order that grows from harmony in families outward.

• Q2. Taking one dimension — EXCHANGE-STORAGE — across levels: in the FAMILY, produce is exchanged among members and grain is stored for the whole family's security; in the VILLAGE, families exchange their surplus (grain for cloth, milk for tools) for mutual fulfilment, and the village stores against drought; at the NATION level, regions exchange what each produces best, and national storage ensures mutual prosperity; at the WORLD level, exchange must be for mutual fulfilment, not exploitation. When exchange is guided by mutual fulfilment at every level, prosperity spreads instead of concentrating.

• Q3. FOUR kinds of production: (1) production of food and bio-materials by nurturing plants and animals (agriculture with nature), (2) production of things from nature through processes that are cyclical and non-violent, (3) production using natural processes without depleting or polluting, and (4) production that actively ENRICHES nature while serving human need. The principle: production must be in mutual enrichment with nature — avartansheel — not in exploitation. The right kind of production gives more to nature than it takes.

• Q4. THREE economics: (1) TAKE-TAKE: taking from nature and taking from others — pure exploitation, the economics of plunder (colonialism, resource wars); it destroys both nature and society. (2) GIVE-TAKE: taking from nature but giving within human society (trade/profit) — better, but still exploitative of nature and competitive among humans; this is roughly today's market economy. (3) GIVE-GIVE: giving to nature (protection, enrichment) and giving to human beings (mutual fulfilment) — the economics of a universal human order, where production and exchange enrich all orders. Only give-give is sustainable and fulfilling.

• Q5. Discussing with my family: our family's goal, we found, was stated mostly in terms of income, house and careers — all physical facility. On reflection we saw that the deeper goal is mutual happiness (every member feeling trust, respect and care) and prosperity (feeling of more-than-required, with the ability to share). Framed this way, decisions change: income is a means for nurturing relationship and participation in society, not an end. A family with this clarity naturally contributes to fearlessness in society instead of merely competing in it.
