Data Structures and Algorithms · 21CSC201J

Unit 1 · Session 7 · SLO 2 — Solved Worksheet

Name: DEEP SAND DEEP SAND | **Reg. No:** RA2511026010557

Unit â€“ 1 : Session â€“ 7 : SLO â€“ 2 | Data Structure Operations and ADTs

I. Fill in the Blanks

1. insertion â€” adding an element.
2. deletion â€” removing an element.
3. access (retrieval) â€” accessing a specific element.
4. searching â€— locating a particular element.
5. sorting â€— arranging elements in a specific order.
6. push â€— stack insertion.
7. pop â€— stack deletion.
8. enqueue â€— queue insertion.
9. dequeue â€— queue deletion.
10. node â€— traversal visits each node exactly once.
11. sorted â€— binary search requires a sorted array.
12. copy (clone) â€— creates a copy of the data structure.
13. rear â€— queue insertion happens at the rear end.
14. front â€— queue deletion happens at the front end.
15. LIFO (Last In First Out) â€— the stack principle.
